HOMELANDNOTIFIER.COM PROVIDES INSTANT ALERTS

Waldorf, MD... Alerting the public of impending and actual threats can be a cumbersome process. Although television, radio and the media broadcast alerts as they become available, those who are surfing the internet or diligently working in front of their computers whether in a government, corporate or home-based office or facility may not have access to news of a threat or alert right away. Delays in receiving threats and alerts can lead to extensive human and/or other loss.

To solve this problem, Kingdomware Technologies, Inc., (KT) has created an affordable downloadable application known as the Homeland Security Notifier™, (HSN™). The HSN™ is an instant alert application that immediately informs computer users of national, state and local threats. In addition to threats and alerts, the HSN™ can display relevant vital information and/or instructions from government officials.

Users receive threat level alerts from the Department of Homeland Security as well as state and/or local government directly relevant to one's city or town. There is also a corporate version for government agencies, commercial businesses and non-profit organizations which also provides additional alerts to specific computer users from an organization's management. (The corporate version is scheduled for an upcoming release.)

HOMELANDNOTIFIER.COM PROVIDES INSTANT ALERTS 2-2-2-2

“This alert tool is for everyone that uses a computer, has access to the internet and who wants to stay informed about threats and alerts,” says KT’s President, LaTonya Barton. “Government officials can send any types of alerts including terrorist threat alerts, emergency alerts, Amber alerts, severe weather advisory alerts, severe traffic advisory alerts and any other alerts that citizens should be aware of to specific regions. They can also send instructions with these alerts so citizens can make better decisions,” LaTonya continues.

“Our alert tool puts HSN™ users in a position of knowledge -- giving them the ability to act on threats, alerts and instructions relevant to their immediate situation. Users receive information and instructions at their computers so they don’t have to search for what they need or wonder what they should do during a threat or an alert,” LaTonya adds. “It can mean the difference between minimal and extensive loss when immediate response is critical.”

For more information on the HSN™ or links to national, state and county government sites, visit <http://homelandnotifier.com>.
