Lead Engineer Achieves Coveted Microsoft Certified Solutions Developer (MCSD) Status

Waldorf, Maryland, July 6, 2001: Lead engineer Timothy Barton, responsible for leading the Kingdomware Technologies' technical efforts, successfully completed Microsoft's examination for certification as a Microsoft Certified Solutions Developer (MCSD). The MCSD status, which is held by less than 5% of developers using Microsoft's development tools in the country, puts Mr. Barton in an elite class which is sure to distinguish Kingdomware Technologies, Inc. as a technical leader in providing solutions using Microsoft technologies.

LaTonya Barton, responsible for leading the company's business operations said, "We are very proud of Mr. Barton and his technical accomplishments. Not only is he a master programmer of Microsoft solutions but also of other languages including Oracle, JAVA, OSF/MOTIF in either a Windows or UNIX platform. His continued success is of great benefit to our company distinguishing us from our competition."

Kingdomware Technologies is a software engineering and business services firm specializing in the development of custom client/server, web, and wireless applications as well as business services in the areas of technology, change, and project management. Kingdomware Technologies does business with the federal government, businesses and non-profits. For further information on the company, visit www.kingdomware.net.
