KINGDOMWARE TECHNOLOGIES, INC. PROVIDES
BUSINESS NOTIFIER™ SERVICE FOR
UNITED STATES AGENCY FOR INTERNATIONAL DEVELOPMENT (USAID)
Charles County firm's Solution sends alerts to employees

(Waldorf, MD) Kingdomware Technologies, Inc., a Charles County software development and management consulting firm, has been selected to provide its ***Business Notifier System™*** solution to USAID – the federal government agency that advances US foreign policy objectives. ***Business Notifier System™*** will allow USAID to send instantaneous alerts to employees in their Washington DC headquarters and domestic offices.

The ***Business Notifier System™*** is a two-fold, subscription, web-based service (<http://www.businessnotifier.com>) that offers employee notification and employee accountability. In the event of an emergency – or need for non-emergency communication – the system immediately informs users of internal corporate threats and alerts via computer, telephone and any cellular device that supports Text Messaging or Short Messaging Service (SMS). When employees are evacuated or instructed to take specific action, the ***Business Notifier System™*** allows them to check in via telephone once they have complied or reached a safe location. With this employee accountability feature, the employer and emergency personnel are able to instantly ascertain if and which employees may remain in harm's way.

The ***Business Notifier System™*** is scalable and customizable for organizations of every size.

Kingdomware Technologies, Inc.'s contract with USAID is for three years. The agency is also considering the option of expanding the existing contract to include employees overseas.

For more information about the ***Business Notifier System™***, go to <http://www.businessnotifier.com>, or contact LaTonya Barton at 1-301-705-5178 ext. 2.
